

Deep IT Assessment

See the full technology picture

A clearer basis for deciding what needs attention first.

We review business alignment and operational maturity; applications, infrastructure, data and cybersecurity; and governance, organization, vendors, projects and costs. The assessment connects the current technology picture with the decisions management needs to make.

CONNECTED CAPABILITIES

01

Business alignment

Review how technology supports business priorities and the operational decisions executives need to make.

02

Operational maturity

Examine current practices and maturity so management can understand strengths, gaps and areas needing attention.

03

Applications and infrastructure

Consider the systems and infrastructure supporting operations within the agreed assessment scope.

04

Data and cybersecurity

Review data and cybersecurity alongside the wider technology environment to inform risk and improvement priorities.

05

Governance and organization

Examine how technology decisions, roles and responsibilities are organized across the business.

06

Vendors, projects and costs

Bring vendor arrangements, current projects and technology costs into the management view.

BUILT AROUND YOUR OPERATIONS

For executives who need a clear view of current technology, risk and maturity before setting priorities or making investment decisions.

From findings to management decisions

Connect the assessment to a practical decision agenda. Give management a clearer basis for deciding which technology issues need attention first.

A TYPICAL ENGAGEMENT JOURNEY

01

FRAME

Agree the business questions and assessment coverage.

02

REVIEW

Examine the current technology and operating context.

03

PRIORITIZE

Review risk, maturity and the most important actions.

04

DECIDE

Use the findings to set a management agenda.

Illustrative engagement. Final sequence follows the agreed scope.

BUSINESS BENEFITS

Current-state clarity

Bring technology, organization and costs into a connected management discussion.

Risk visibility

Use risk and maturity scorecards to review where attention is needed.

Action priorities

A clearer basis for deciding what needs attention first.

Engagement and outputs

Executive findings, risk and maturity scorecards, prioritized actions and a practical decision agenda.

Use the findings to discuss priorities across technology, operations and governance. The decision agenda provides a starting point for the next management discussion.

Scope to confirm

Assessment coverage, evidence access, stakeholder participation, review depth and expected outputs are defined around the management decisions to be supported.

The iThink approach

ALIGN WITH MANAGEMENT

Start with business priorities and the questions executives need answered.

REVIEW THE CURRENT STATE

Consider technology, operating maturity, governance, vendors, projects and costs.

BRING FINDINGS TOGETHER

Connect the evidence with risk and maturity scorecards and prioritized actions.

SUPPORT THE NEXT DECISION

Present the practical decision agenda for management review.

Discuss your assessment priorities

Let us define the decisions your assessment should support and agree the right coverage.
