

NETWORKS & CONNECTIVITY

Designed, implemented and connected

Beyond advisory and design, iThink delivers complete, end-to-end solutions through active specialist partners.

iThink designs network solutions connecting people, systems and locations. Through active specialist partners, iThink implements and integrates LAN, WAN, Wi-Fi, internet and SD-WAN configurations, branch connectivity, segmentation and monitoring, with deployment, testing, training and handover within the agreed scope.

CONNECTED CAPABILITIES

01

LAN and WAN foundations

Design and implement local and wide area connectivity around applications, site dependencies and operating needs.

02

Wi-Fi access

Configure and deploy wireless access, then validate coverage and access requirements for the agreed locations.

03

Internet and SD-WAN

Implement agreed internet and SD-WAN configurations, coordinating provider dependencies and resilience requirements.

04

Branch connectivity

Integrate branch connections with the wider network and validate communications for the agreed sites and services.

05

Network segmentation

Configure network segments and access controls to implement the agreed separation and security requirements.

06

Management and monitoring

Set up network management and monitoring, document configurations and prepare teams for ongoing operation.

BUILT AROUND YOUR OPERATIONS

For organizations connecting offices, branches and business systems that need end-to-end network delivery and clear operational responsibilities.

Delivering connected operations

Through active specialist partners, iThink takes site requirements through network configuration, integration and rollout, followed by testing, training and agreed support.

A TYPICAL ENGAGEMENT JOURNEY

01

DISCOVER

Review sites, access and service needs.

02

DESIGN

Define architecture, segmentation and resilience.

03

IMPLEMENT

Configure, integrate and deploy connectivity.

04

HAND OVER

Test connections, train teams and enable support.

Illustrative engagement. Final sequence follows the agreed scope.

BUSINESS BENEFITS

Connected locations

Deliver site connectivity aligned with the people, systems and services it supports.

Validated configuration

Check connectivity, segmentation and agreed resilience arrangements before handover.

Operational visibility

Equip teams with monitoring, documentation and clear network support responsibilities.

Integration and deployment

Through active specialist partners, iThink configures and integrates connectivity across agreed sites, infrastructure and security systems, coordinating provider dependencies and rollout sequencing.

Through active specialist partners, iThink tests connections and access controls, documents the network and trains teams. Monitoring and continuing support follow the agreed scope.

Scope to confirm

Site coverage, providers, equipment, configurations, monitoring, resilience and support depend on findings and agreed scope. Confirm service expectations before delivery.

The iThink approach

UNDERSTAND ACCESS

Establish how people, locations and applications use the network.

DESIGN THE SOLUTION

Align connectivity, capacity, segmentation and resilience with operating needs.

DELIVER AND TEST

Configure, integrate and deploy the network, then validate agreed connections.

HAND OVER AND SUPPORT

Train teams, document configurations and provide agreed monitoring and support.

Discuss your connectivity solution

Let us design and deliver the network your people, locations and business systems need.
